

## **AI-based Image-to-Text and PDF-to-Text converter**

An **AI-based Image-to-Text and PDF-to-Text converter** uses Optical Character Recognition (OCR) and machine learning to extract text from images and PDF documents. It analyzes visual content, detects characters, and converts them into editable digital text. This allows users to quickly digitize scanned documents, photos, or non-selectable PDFs without manual typing, making it useful for document processing, data extraction, and automation.
